

Admin manual QA test plan

Every job an operator does to run the store, written so it can be tested by hand with no technical knowledge.

Cases	290
Sections	19
Store	https://bidyut-commerce.vercel.app
Admin	https://bidyut-commerce.vercel.app/admin
You need	A full admin account. Section 14 also needs a manager account to test permissions against.
Also useful	A phone, for the map and for two-cards-per-swipe checks. The location prompt only appears over HTTPS.
Test data	Prefix anything you create with 'QA' so it is easy to find and remove afterwards. Section 19 ends with the clean-up.
Money	Written as Tk throughout.

How to use this: work top to bottom. Later sections assume the earlier ones passed -- you cannot test an order without a product, and you cannot test a product without a category. If a case fails, note it and carry on; one failure rarely blocks the rest.

What is covered

Section	Cases
1. Getting in, and who can see what	14
2. Categories and brands -- adding, editing, ordering	44
3. Products -- creating and editing	41
4. Stock	6
5. Orders -- the daily work	14
6. Payments -- manual bKash and Nagad	10
7. Customers	6
8. Coupons	10
9. Promotions -- volume discounts and bundles	22
10. Credit accounts -- selling on account	10
11. Banners and the homepage	15
12. Reviews	6
13. Reports	6
14. Staff and permissions	10
15. Design -- colours and fonts	14
16. Settings -- the numbers that run the shop	22
17. Points and referrals -- the loyalty side	13
18. Checkout location -- the map	10
19. A full run from empty -- the end-to-end check	17

1. Getting in, and who can see what

Do this first. Everything else assumes you are signed in as a full admin, and section 14 assumes you have a manager to test against.

ID	What to do	What should happen	Pass	Notes
A-001	Open /admin while signed out.	Redirected to the sign-in page with ?next=/admin. No admin content flashes first.		
A-002	Sign in with a customer account (no staff role), then open /admin.	Redirected away to the storefront. No admin page is reachable by typing the URL.		
A-003	Sign in as the admin account. Open /admin.	Dashboard loads. KPI tiles appear first, then the chart and tables fill in.		
A-004	Look at the left navigation.	16 links: Products, Categories, Brands, Stock, Orders, Payments, Customers, Coupons, Promotions, Banners, Reviews, Reports, Credit accounts, Staff, Design, Settings.		
A-005	Read each dashboard tile: today's sales, this month, gross margin, pending, delivered, customers, low stock, reviews to moderate.	Eight tiles, all showing numbers (zero is fine). None stuck on a loading skeleton.		
A-006	Click the 'Pending orders' tile.	Opens the orders list already filtered to placed orders.		
A-007	Click 'Low stock' and 'Reviews to moderate' tiles.	Each opens its own section. Counts on the tile match what the page lists.		
A-007a	Click Products, then Orders, then Customers, then Dashboard in the left navigation, one after another.	Each click responds at once with a grey loading outline, and the page fills in shortly after (about a second or less on normal mobile data). No click feels frozen.		
A-007b	On a phone, check the bottom bar: Home, Menu, Cart, Search, Account.	Menu opens the side menu (headed 'Browse'); Search jumps to the search box; Cart shows the item count. On a computer the bar is not shown.		
A-007c	Open the menu and tap 'Request a Product' (also in the footer under Help). Fill name, email, product name and send.	'Request sent'. In admin, 'Product requests' shows a badge count, and the request is listed under New with the customer's email / phone / WhatsApp links.		
A-007e	In Product requests, change a request's status to Contacted, then Sourced; delete one.	It moves between the New / Contacted / Sourced / Closed tabs; the badge counts only New. Deleted requests disappear.		
A-007f	Send more than 5 requests with the same email in one day.	The sixth is refused politely; the first five are listed.		
A-007d	On a phone, open All products and tap the single 'Filters' button.	'Sort & filter' opens with 'Sort by' first: choosing 'Price: high to low' or 'Price: low to high' re-orders the products, and the button then shows the order. On a computer the same 'Sort by' list heads the filter sidebar.		
A-008	Sign out from the admin panel.	Returned to the storefront, signed out. Going back to /admin asks you to sign in again.		

2. Categories and brands -- adding, editing, ordering

Categories drive the storefront navigation, the homepage tiles and the listing filters. Test these before products, because a product needs a category. Keep one small JPG or PNG picture on the computer or phone you test with -- every picture in admin is uploaded from the device; there are no link boxes.

ID	What to do	What should happen	Pass	Notes
C-001	Open Categories. Count the existing rows.	All current categories listed, each showing how many products it holds.		
C-002	Click 'New category'. Enter name 'QA Test Category' and save with the slug field left empty.	Saved. The slug is generated automatically from the name (qa-test-category).		
C-003	Create a second category and type the SAME slug by hand.	Rejected with 'That slug is taken.' Nothing is created.		
C-004	Edit 'QA Test Category': add a description and an icon name (for example Headphones).	Saved. The icon shows on the row and on the storefront category tile.		
C-005	Enter a nonsense icon name like 'NotAREallcon' and save.	Saves without error and falls back to a default box icon. No crash.		
C-006	Set position to 1 on your test category and save.	It moves to the top of the list, and to the front of the storefront nav bar.		
C-007	Tick 'Featured' and save. Open the storefront homepage.	It appears in the 'Shop by category' grid (which shows 12 featured tiles).		
C-008	Untick 'Active' and save. Open the storefront.	Gone from the nav bar, the drawer and the homepage grid. Still listed in admin.		
C-009	Open the storefront drawer (Categories button) and count the rows.	Every active category appears, each with a tag icon, plus the red Sale row.		
C-009a	On a laptop or desktop, look at the category bar under the search box.	One tidy line: whole category names only, no scrollbar, a 'More +N' button when some do not fit, and Track on the right. Narrowing the window moves more names into More.		
C-009b	Click 'Categories' (or 'More') in that bar.	A panel opens with EVERY active category in a grid, plus All products and On sale. Choosing one opens it and closes the panel; Escape or a click outside closes it. Change a category's position and the bar's order follows.		
C-010	Delete 'QA Test Category' while it has no products.	Deleted. It disappears from admin and the storefront.		
C-011	Assign a product to a category, then try to delete that category (section 3 first).	Refused: the message says products still use it. Nothing is deleted. Move the products to another category first, then the delete works.		
C-012	Edit a category and press 'Upload picture'. Choose a photo from the device.	A spinner shows, then the picture appears in the form. Save: the picture shows on the homepage category tile.		
C-013	Edit that category again, remove the picture with the X, and save.	The tile falls back to its icon. No broken-image box anywhere.		
C-014	Try to upload a PDF or a text file as a category picture.	Refused with 'use a JPG, PNG, WebP or AVIF picture'. Nothing is uploaded.		
C-014b	On a phone, swipe the 'Shop by category' section sideways.	Two rows of tiles move together, through every main category.		

ID	What to do	What should happen	Pass	Notes
C-014a	Open the homepage on a computer, then on a phone.	'Shop by category' is ONE row either way -- six tiles on a computer, four on a phone or tablet. 'See all' opens an All categories page with every category.		
C-015	Create 'QA Earbuds' with Parent category = an existing main category (e.g. Headphone & Earphone). Save.	In the list it appears indented under its parent, and the parent shows '1 sub'.		
C-016	Put a product in 'QA Earbuds'. Open the parent category on the storefront.	The product is listed there too, and chips across the top offer 'All ' and 'QA Earbuds'. The product form's Category list shows it indented under its parent.		
C-017	On a phone, open the menu and tap the parent category.	It opens in place to show 'All ' and its sub-categories. On a computer, the Categories panel lists the sub-categories under the parent.		
C-018	Edit a sub-category and try to choose ANOTHER sub-category as its parent.	Not offered -- only main categories are listed as parents.		
C-019	Try to delete the parent while it still has sub-categories.	Refused: move or delete the sub-categories first. Set 'QA Earbuds' back to 'None -- main category' (or delete it) and the parent can be deleted.		
BR-001	Open Brands. Note the brands and their product counts.	Every brand listed, each with the number of products that use it.		
BR-002	Click 'New brand'. Name it 'QA Brand', leave the slug empty, press 'Upload logo', choose a picture, and create it.	Created with slug qa-brand and the logo shown on its row.		
BR-003	Open a product and pick 'QA Brand' in its brand list. Save. Open the storefront listing and filter by brand.	QA Brand is offered as a filter and shows that product.		
BR-004	Edit 'QA Brand': fix the spelling of its name and save.	The new name shows on the product page and in the storefront filter.		
BR-005	Untick 'Show on the storefront' and save.	Row shows 'Hidden'. The brand leaves the storefront filter; its products are unaffected.		
BR-006	Try to delete 'QA Brand' while a product uses it.	Refused: products still use it. Nothing is deleted.		
BR-007	Move that product to another brand, then delete 'QA Brand'.	Deleted. It disappears from admin and the storefront filter.		
BR-008	Create a brand with the same slug as an existing one.	Rejected with 'That slug is taken.'		
BR-008a	Try to create a brand WITHOUT uploading a logo.	Refused: 'Upload the brand's logo'. Older brands without one show a 'No logo' tag in the list -- edit them and upload one.		
BR-008b	Upload logos for a few brands. Open the homepage on a phone.	'Our brands' shows the logos two at a time; swipe for more, the dots follow. 'See all' opens the Brands page, where typing in 'Search brands' narrows the list and tapping a brand shows its products.		
BR-008c	Edit a brand: write a few lines in 'About the brand' and save. Tap that brand in 'Our brands' on the homepage.	Its page shows the logo, the text (long text folds with 'Read more') and 'Brand products'. A 'See all' link appears when it has more products than fit.		
BR-009	Open New product. Under Brand press 'New brand', type 'Walton' and press Enter.	Walton is added and selected in the Brand list. The product itself is NOT saved yet and nothing you typed in the form is lost.		

ID	What to do	What should happen	Pass	Notes
BR-010	Finish the product and save it. Open Brands in a new tab.	The product is saved with brand Walton, and Walton is listed on the Brands page.		
BR-011	In the product form press 'New brand' and type 'anker' (lowercase) for a brand that already exists as 'Anker'.	Message: 'Anker already exists -- selected it.' No second Anker appears anywhere.		
BR-012	Select a brand, press 'Rename ', fix its spelling and press Save.	The new name shows in the list at once, on the Brands page, and on the storefront product pages of that brand.		
BR-012a	After renaming a brand, search the storefront for the NEW name.	Every product of that brand is found. Searching the old spelling no longer finds them by brand.		
BR-013	Rename a brand to the exact name of ANOTHER existing brand.	Refused: 'Another brand is already called ...'. Nothing changes.		
BR-014	Add a brand whose name is typed only in Bangla letters (for example Walton written in Bangla).	Added and selected without errors.		
BR-015	Open the add box, then press Escape (or the X).	The box closes and the previously selected brand is still selected.		
BR-016	Press 'New brand', type a name, and WITHOUT pressing Add click 'Create product'.	The product is not saved. The browser points at the brand box: 'Press Add to create this brand, or cancel it, before saving the product.'		
BR-017	Fill a product, but give it a SKU that another product already uses, and save.	Refused with the duplicate-SKU message. Everything you typed -- and the brand you chose -- is still in the form.		

3. Products -- creating and editing

The core of the job. Work through one product completely rather than skimming several.

ID	What to do	What should happen	Pass	Notes
P-001	Open Products. Note the count in the heading.	Header shows the true total, not just the number of rows on screen.		
P-002	Scroll to the bottom of the product list.	More rows load automatically as you reach the end. A 'Load more' button appears if they do not.		
P-003	Search for a product by name.	Only matching rows shown. The count updates.		
P-004	Search using a SKU instead.	Matches on SKU as well as name.		
P-005	Search for a term containing a comma or bracket, e.g. 'Pack (2)'.	No error. The search treats it as text, not as filter syntax.		
P-006	Use the Active / Draft / Archived filter buttons.	Each filter narrows the list. The active filter is highlighted.		
P-007	Click 'New product'. Fill name, slug, SKU, price and stock only. Save.	Created. You land on the product or back in the list with a success message.		

ID	What to do	What should happen	Pass	Notes
P-008	Try to save a product with no name.	Rejected with a field message. Nothing is created.		
P-009	Try to save a second product with the SAME SKU.	Rejected. SKUs must be unique.		
P-010	Set a compare-at price LOWER than the price and save.	Rejected. Compare-at must be higher than the price, or empty.		
P-011	Set compare-at higher than price. Open the product on the storefront.	A discount badge shows the percentage saved, with the old price struck through.		
P-012	Set a cost price and save. Look at the product row in admin.	Margin column shows money and a percentage. Cost is never shown on the storefront.		
P-013	Open the product page on the storefront as a signed-out visitor and view the page source.	The cost price appears nowhere in the HTML.		
P-014	Fill description, short description, specifications, features, warranty, and delivery note. Save. Open the storefront product page.	Every field appears in its correct place: tabs for description and specifications, a ticked list for features.		
P-015	In the Pictures box press 'Add pictures' and choose THREE photos at once from the device. Save.	All three upload with a spinner, the first is marked 'Main'. After saving, the main picture is on the product card, and all three are in the product page gallery.		
P-015a	Use the arrows to move the third picture first (or press its star), then save.	That picture is now 'Main' and becomes the card picture on the storefront.		
P-015b	Remove one picture with the X and save. Reopen the product.	Only the remaining pictures come back, in the order you left them.		
P-015c	Remove EVERY picture from a product and save. Reopen it.	The Pictures box is empty and no old picture comes back on the storefront card.		
P-015d	Upload a large phone photo (over 5 MB).	Accepted: it is shrunk on the device before upload. It still looks sharp on the product page.		
P-015e	Try to add a 9th picture.	The button is disabled at 8/8. Extra files chosen at once are skipped with a message.		
P-016	Set 'Reward points' to 50 and save. Open the storefront product page.	'Earn 50 points with this item' appears near the price.		
P-017	Add that product to the cart and open the cart.	'Earn 50 points when this order is delivered' appears (doubles to 100 for 2 units).		
P-018	Set Reward points back to 0 and reload the product page.	The points line disappears entirely.		
P-018e	Look at product cards on the storefront.	The photo shows 'In stock' (green) or 'Only N left' (red) when low; discounted items show '-N% OFF' and 'Save Tk X' under the price; items ticked New arrival show 'New' (a brand-new product starts ticked).		
P-018a	Tick 'New arrival' on a product and save. Open the homepage.	It appears in the 'New arrivals' row. The row shows ONLY products ticked 'New arrival', newest first, and the same list every time you reload.		

ID	What to do	What should happen	Pass	Notes
P-018b	Press 'See all' on the New arrivals row.	A page titled 'New arrivals' listing exactly the ticked products.		
P-018c	Untick 'New arrival' on that product and save.	It leaves the row. (If NO product is ticked at all, the row shows the most recently published products instead, so the homepage is never empty.)		
P-018d	Tick 'Best seller' / 'Featured' on a product.	It joins the homepage 'Best sellers' row (ordered by units sold) / 'Handpicked for you' grid.		
P-019	Set the product status to Draft.	Gone from the storefront listing and search. Its URL no longer shows it for shoppers.		
P-020	Set it back to Active.	Visible on the storefront again.		
P-021	Use the status toggle directly from the product list row.	Status flips without opening the product. The list reflects it immediately.		
P-022	Archive a product.	Leaves the Active list, appears under Archived, and is not purchasable.		
P-022a	Create a throwaway product 'QA Delete Me' with a picture. In the product list press its bin icon and read the message.	It asks to delete permanently, says pictures, reviews and promotions go with it, that past orders keep their record, and suggests Archive for a reversible option.		
P-022b	Press Cancel.	Nothing happens. The product is still listed.		
P-022c	Press the bin again and confirm.	'QA Delete Me deleted.' It leaves the list and the storefront; its URL shows 'not found'.		
P-022d	Open a product that has been ORDERED before, press Delete at the top of its page, and confirm. Then open that old order in Orders.	The product is gone, and you are back on the product list. The old order still shows the item's name, SKU, price and picture exactly as before.		
P-022e	Make a bundle of two products (section 9), then delete ONE of them.	The message says the bundle was deleted too. It is gone from Promotions, and the other product alone gets no bundle discount in the cart.		
P-022f	After deleting a product that sold this month, open the Dashboard.	The Gross margin tile says it excludes the sold lines of deleted products, rather than counting their whole price as profit.		
P-023	Set stock to 0 on an active product. Open the storefront.	Shows as out of stock. Add to cart is unavailable.		
P-024	Set low-stock threshold to 5 and stock to 3.	Appears in Stock and on the dashboard 'Low stock' tile.		
P-025	Set a video URL and save.	The video appears on the storefront product page.		

4. Stock

Stock is the number most often wrong in a shop. Check it moves in both directions.

ID	What to do	What should happen	Pass	Notes
S-001	Open Stock. Note which products are flagged out of stock or low.	Colour coded: red for zero, amber for at or below threshold.		
S-002	Change a stock number in the table and move focus away.	Saves immediately without a separate save button. The colour updates.		
S-003	Enter a negative stock number.	Rejected or clamped to zero. Stock never goes below zero.		
S-004	Note a product's stock, buy 1 of it on the storefront, return to Stock.	Stock has dropped by exactly 1.		
S-005	Cancel that order from the Orders section, then return to Stock.	Stock has gone back up by 1. Cancelling returns inventory.		
S-006	Set a product's stock to 1 and try to order 2 of it on the storefront.	The cart flags it and will not let you check out with more than exists.		

5. Orders -- the daily work

This is what an operator touches most. Place a real test order on the storefront first so there is something to work with.

ID	What to do	What should happen	Pass	Notes
O-001	Place a cash-on-delivery order on the storefront, then open Orders.	The order appears at the top with status 'placed' and the correct total.		
O-002	Open the order.	Customer name, phone, full shipping address, every line item, delivery charge, and the total all match what the customer saw.		
O-003	If the customer used the map at checkout, look for the location.	Latitude, longitude and the place label are stored with the order.		
O-004	Move the order: placed -> confirmed.	Status changes. A history entry is added with a timestamp.		
O-005	Continue: confirmed -> processing -> shipped -> out for delivery -> delivered.	Each step is accepted and recorded in the order history in order.		
O-006	Check the customer's points after marking it delivered (product must have points set).	Points are added to their balance. Account -> Refer & earn shows the entry.		
O-007	Set the order back to shipped, then to delivered again.	Points are NOT awarded a second time. The balance is unchanged.		
O-008	Place another order and cancel it from placed.	Status is cancelled, a reason is recorded, and the stock returns.		
O-009	Add an internal note to an order.	Saved and visible to staff. It does NOT appear anywhere on the customer's view.		
O-010	Filter the orders list by status.	Only orders in that status are listed.		
O-011	Search orders by order number.	The matching order is found.		

ID	What to do	What should happen	Pass	Notes
O-012	Search by customer phone number.	The customer's orders are found.		
O-013	Open the storefront /track page and enter the order number and phone.	The customer sees the current status and history, and nothing about other orders.		
O-014	Enter a correct order number with the WRONG phone on /track.	Nothing is shown. The order number alone is not enough to see an order.		

6. Payments -- manual bKash and Nagad

Money changing hands. Test this carefully; it is where mistakes cost real Taka.

ID	What to do	What should happen	Pass	Notes
M-001	On the storefront, place an order choosing bKash.	You land on a pay page showing the number to send to and the amount.		
M-002	Look for the payment countdown on that page.	A timer shows how long is left to pay before the order is cancelled.		
M-003	Submit a transaction ID and a screenshot as the customer.	Confirmation that it is awaiting verification. The page no longer invites payment.		
M-004	Open Payments in admin.	The submission is listed as pending, with the order, amount and transaction ID.		
M-005	Open the screenshot the customer uploaded.	It opens. The link is temporary and not a permanent public URL.		
M-006	Approve the payment.	Payment marked verified, the order moves to confirmed, and who approved it is recorded.		
M-007	Place a second order and submit the SAME transaction ID.	Rejected as already used. One transaction ID cannot pay for two orders.		
M-008	Reject a submitted payment with a reason.	Marked failed with the reason stored. The customer can see they must try again.		
M-009	Place a bKash order and simply do not pay. Wait past the payment window, then reload the pay page.	The order is cancelled automatically and the stock has returned.		
M-010	Check Settings for the payment window value.	The number of minutes is configurable, and the checkout warning matches it.		

7. Customers

ID	What to do	What should happen	Pass	Notes
U-001	Open Customers. Note the total in the heading.	Accounts listed newest first, 30 at a time, with orders and spend per customer.		
U-002	Scroll to the bottom of the list.	More customers load as you reach the end.		
U-003	Search by name, then by email, then by phone.	Each finds the right customer.		
U-004	Change a customer's role to manager.	Saved. That account can now reach the admin panel.		

ID	What to do	What should happen	Pass	Notes
U-005	Try to change your OWN role.	Not allowed. You cannot remove your own access and lock yourself out.		
U-006	Sign in as a manager and open Customers.	Role dropdowns are not editable. Only a full admin changes roles.		

8. Coupons

ID	What to do	What should happen	Pass	Notes
K-001	Create a percentage coupon, for example QA10 at 10%.	Created and listed as active.		
K-002	Apply QA10 in the storefront cart.	Discount applied and shown as a separate line in the summary.		
K-003	Apply it again at checkout in the Order summary box.	Works the same way. Both entry points behave identically.		
K-004	Create a fixed-amount coupon, for example QA100 for Tk 100.	Applies a flat Tk 100 off.		
K-005	Set a minimum order value, then try the coupon on a smaller cart.	Rejected with a message explaining the minimum.		
K-006	Set a usage limit of 1 and use it once, then try again.	Rejected as exhausted.		
K-007	Set an end date in the past and try the coupon.	Rejected as expired.		
K-008	Toggle a coupon off and try it.	Rejected. Toggling back on makes it work again.		
K-009	Enter a code that does not exist.	Rejected clearly, with no hint about which codes are real.		
K-010	Apply a coupon, then remove it in the cart.	Total returns to what it was before.		

9. Promotions -- volume discounts and bundles

Both are priced in SQL beside coupons, so a promotion and a coupon can never disagree with the cart.

ID	What to do	What should happen	Pass	Notes
R-001	Open Promotions. Create a quantity break: type part of a product's name (or its SKU) in the search box, pick it from the list, minimum 3, 15% off.	Matching products appear as you type, with picture, SKU and price. The chosen one shows as a chip. After saving, the rule is listed under the product's name and the form is empty again.		
R-001a	Search with the words in a different order (e.g. 'tune jbl' for 'JBL Tune 520BT').	The product is still found. Words can be in any order.		
R-001b	Search for something that does not exist.	'No product matches ...' -- no error.		
R-001c	In the search box use the arrow keys to highlight a result and press Enter.	The highlighted product is chosen. The form is NOT submitted by the Enter key.		

ID	What to do	What should happen	Pass	Notes
R-002	Open that product on the storefront.	'Buy more, save more' panel shows 'Buy 3 or more' and the per-unit price after the discount.		
R-003	Add 2 of that product to the cart.	No discount. The tier has not been reached.		
R-004	Increase to 3.	The discount applies and shows as an 'Offers' line in the cart summary.		
R-005	Try to create a second rule with the same product and the same minimum.	Rejected. One rule per product per quantity.		
R-006	Try a minimum quantity of 1.	Rejected. A 'buy 1' break is just a price change.		
R-007	Create a category-wide rule, then a product rule on a product in that category with a different percentage.	The product rule wins in the cart. The product page advertises the same one.		
R-008	Create a bundle: search and add two products (each appears as a chip; the X on a chip removes it), 10% off.	The button counts the products picked. After saving, the bundle is listed with both product names.		
R-009	Open either product on the storefront.	The bundle panel shows both items, their prices, and the total saving.		
R-010	Put only ONE of the two in the cart.	No bundle discount.		
R-011	Add the second one.	The bundle discount applies, taken off those lines only.		
R-012	Add an unrelated third product to the same cart.	The bundle discount does not grow. It is based on the bundle's own items.		
R-013	Try to create a bundle with only one product selected.	Rejected. A bundle needs at least two.		
R-014	Delete a quantity break and a bundle.	Both disappear from admin and stop applying in the cart.		
R-015	At the top of Promotions, open the old 'Weekend flash sale' (it shows Ended). Set Ends to a time later today (Bangladesh time) and save.	It now shows 'Live now'. The homepage shows the Flash sale row with a countdown to that time, and its products at the sale price.		
R-016	In the sale, search a product, enter a sale price BELOW its price and 10 units. Add.	It is listed with the discount %. Adding it to the cart charges the sale price.		
R-017	Try a sale price equal to or above the product's normal price.	Refused: the sale price must be below the regular price.		
R-018	Create a 'New flash sale' starting tomorrow.	Listed as 'Scheduled'; nothing changes on the storefront until it starts.		
R-019	Untick 'Switched on' on the live sale and save.	Status 'Switched off'. The homepage row and countdown disappear; normal prices apply.		

10. Credit accounts -- selling on account

For regulars who settle later. Looked up at checkout by phone number.

ID	What to do	What should happen	Pass	Notes
D-001	Open Credit accounts. Grant one: a real phone, a name, limit Tk 5,000.	Account created and listed with limit, outstanding and available.		
D-002	Enter an invalid phone number.	Rejected with a message. Nothing is created.		
D-003	Enter the SAME phone again with a different limit.	Updates the existing account rather than creating a duplicate.		
D-004	On the storefront checkout, type that phone and press 'Check credit'.	Account found. Holder name, available and outstanding shown.		
D-005	Type a phone with NO account and press 'Check credit'.	Says no account found. It does not hint at other people's accounts.		
D-006	Tick 'Use credit' and place the order.	Order placed. The amount goes on the account instead of being collected.		
D-007	Return to Credit accounts.	Outstanding has risen and available has fallen by the order amount.		
D-008	Keep ordering until the limit is used up.	At the limit the checkbox is unavailable and a message explains why.		
D-009	Record a repayment against the account.	Outstanding drops and available rises by that amount.		
D-010	Pause the account (untick active), then check it at checkout.	Reports no account. A paused account cannot be used.		

11. Banners and the homepage

ID	What to do	What should happen	Pass	Notes
B-001	Open Banners. Create a hero banner: press 'Upload picture' and choose a tall (portrait) photo, then add title, subtitle, Bangla eyebrow text, link and accent colour.	Created. It appears in the homepage hero card rail with the uploaded picture.		
B-001a	Edit that banner, press 'Replace picture', choose a different photo and save.	The new picture shows on the homepage card; the old one is gone.		
B-001b	While editing banner A, click edit on banner B.	The form switches to banner B's own title and pictures -- nothing carried over from A.		
B-002	Open the homepage on a PHONE-width screen.	Exactly two hero cards fill the row. No sliver of a third is visible.		
B-003	Swipe the hero hard, as far as you can in one gesture.	It advances exactly ONE card, no matter how long or fast the swipe.		
B-004	Swipe back.	Goes back exactly one card.		
B-005	Check the Bangla eyebrow text renders.	Bangla characters display correctly. No empty boxes.		
B-006	Create a promo strip banner.	Appears as the dark bar under the hero.		
B-007	Create an offer card banner.	Appears in the 'Why shop with us' section.		

ID	What to do	What should happen	Pass	Notes
B-008	Set a banner's start date in the FUTURE.	It does not appear on the storefront yet.		
B-009	Set a banner's end date in the PAST.	It no longer appears.		
B-010	Set priority on two banners.	Higher priority shows first in the rail.		
B-011	Untick active on a banner.	Removed from the storefront immediately.		
B-012	Click a hero card's button on the storefront.	Goes to the link you set, and that page loads.		
B-013	Delete a banner.	Gone from admin and the storefront.		

12. Reviews

ID	What to do	What should happen	Pass	Notes
V-001	As a customer who has a DELIVERED order, leave a review on that product.	Accepted and held for moderation. It is not public yet.		
V-002	Try to review a product you have never bought.	Not allowed. Only verified buyers can review.		
V-003	Open Reviews in admin.	The pending review is listed with the product, the rating and the customer.		
V-004	Approve it, then open the product on the storefront.	The review is public, and the product's rating average updates.		
V-005	Reject a different review.	It never becomes public.		
V-006	Check the homepage review wall.	Only approved reviews of 4 stars or more appear, with surnames shortened to an initial.		

13. Reports

ID	What to do	What should happen	Pass	Notes
T-001	Open Reports.	Revenue, discounts, delivery, cancellations, average order value and gross profit.		
T-002	Switch the window: 7, 30, 90, 180 days.	Every figure and the chart change to match the window.		
T-003	Compare revenue against the orders list for the same period.	They agree. Cancelled and returned orders are excluded from both.		
T-004	Look at the per-product table.	Ranked by revenue, showing units, revenue and margin per product.		
T-005	Look at the payment method breakdown.	Counts per method add up to the number of valid orders.		

ID	What to do	What should happen	Pass	Notes
T-006	If the shop is very busy, check for a truncation notice.	A warning appears saying the figures cover only the most recent orders. It does not present a partial number as the whole truth.		

14. Staff and permissions

Only a full admin can do this. This is the section that protects everything else.

ID	What to do	What should happen	Pass	Notes
W-001	Open Staff. Add a staff member by their account email.	Found and added. An unknown email is reported clearly.		
W-002	Give them the manager role with only Products and Stock permissions.	Saved.		
W-003	Sign in as that manager.	Only Products and Stock appear in the navigation.		
W-004	As that manager, type /admin/settings in the address bar.	Blocked. Typing the URL does not get past the permission.		
W-005	As that manager, type /admin/staff in the address bar.	Blocked. Staff and Settings are admin-only and cannot be delegated.		
W-006	As that manager, try /admin/design and /admin/credit.	Both blocked. They are admin-only.		
W-007	Back as admin, add the Orders permission to that manager.	The manager now sees Orders too, after a reload.		
W-008	Remove all permissions from the manager.	They can sign in but see no sections.		
W-009	Try to change your own staff access.	Refused. You cannot lock yourself out.		
W-010	Remove the staff member entirely.	Their admin access ends. The customer account itself still works.		

15. Design -- colours and fonts

Admin only. Changes go live on the storefront as soon as you save.

ID	What to do	What should happen	Pass	Notes
G-001	Open Design. Drag a colour picker.	The live preview on the right updates instantly, without saving.		
G-000	Open the storefront.	The header shows the Bindu Tech logo, and buttons, links and the phone navbar use the logo green (#016952). The browser tab shows the green logo icon.		
G-000a	In Settings -> Store, replace the Logo with another picture and save.	The header shows the new logo. Removing it (X) and saving shows the store name as text instead.		

ID	What to do	What should happen	Pass	Notes
G-001a	Look at the 'Brand palette' card.	Twelve colours: Bindu green #016952 first, then Midnight navy #0B0F1A, Dark slate #151B2B, Violet #6C5CE7, Neon cyan #00E5FF, Off-white #F2F4F8, Deep navy #0F172A, Orange #FF6A00, Light grey #F3F4F6, Jet black #111111, Crimson red #FF2E4D, Yellow #FFD400.		
G-001b	Under 'Primary', tap the Violet swatch.	Primary becomes #6C5CE7, the swatch gets a ring, and the preview button turns violet.		
G-001c	Under 'Primary', tap Neon cyan (or Yellow).	A yellow box warns that white button text on it will be hard to read, with the ratio. Saving is still allowed.		
G-001d	Set Primary to Violet and save. On the storefront, look at a selected filter chip, the selected delivery option and a hovered button.	The light tints and hover shades are violet too -- no leftover blue anywhere.		
G-002	Change the primary colour and press Save. Open the storefront.	Buttons, links and highlights use the new colour throughout.		
G-003	Change the heading font and save. Reload the storefront.	Headings change. Body text is unaffected.		
G-004	Change the body font and save.	Body and interface text change.		
G-005	Open a page with Bangla text (the homepage hero).	Bangla still renders correctly whatever Latin font is chosen. No empty boxes.		
G-006	Drag the corner rounding slider to 0 and save.	Cards and buttons become square on the storefront.		
G-007	Press 'Reset to default'.	The original palette, fonts and rounding come back on the storefront.		
G-008	As a manager (not admin), try to open /admin/design.	Blocked.		

16. Settings -- the numbers that run the shop

ID	What to do	What should happen	Pass	Notes
N-001	Open Settings. Change the store name and save. Open the storefront.	The new name shows in the header, the page title, the footer, the homepage 'Buying from ...' and 'Best sellers' lines, and the About page. The developer credit line is not the store name and does not change.		
N-001a	Under Store, rewrite 'About the store' and save.	The paragraph under the store name in the footer changes.		
N-002	Under Contact, change the phone, WhatsApp, email and hours.	All appear in the footer and on the Contact page. The chat bubble (bottom right) calls and WhatsApps the NEW numbers.		
N-002a	Type the phone as 01712345678 (starting with 0) and save. Reload Settings.	It still starts with 0 -- the leading zero is kept.		
N-002b	Type an email without an @ (e.g. 'bindutech.com') and save.	Refused: the email box asks for a full address. Nothing is saved until it is fixed. (The footer never shows an email line for an invalid address.)		

ID	What to do	What should happen	Pass	Notes
N-002c	Under Social links, change the Facebook link, clear the YouTube box, and enter a Messenger username. Save.	The footer's Facebook icon opens the new page, the YouTube icon is gone, and the chat bubble offers Messenger (m.me/username).		
N-002d	Paste a social link without https:// (e.g. 'facebook.com/x').	Refused with 'Paste the full link, starting with https://'.		
N-003	Under Homepage, change the Warranty & replacement text.	Appears on the homepage Warranty card and on every product page.		
N-003a	Under Homepage, change card 2's icon, title and text. Save and open the homepage.	The 'Buying from ...' row shows the new icon and words.		
N-003b	Clear card 4's title AND text and save.	The homepage row shows three cards. Typing into card 4 again brings it back.		
N-003c	Leave the Delivery card box empty, then change the Inside Dhaka charge (Delivery zones, lower on the page).	The homepage Delivery card rewrites itself with the new charge. Typing your own text in the box replaces it; clearing the box goes back to the automatic text.		
N-004	Change the showroom address.	Appears in the storefront footer and on the Contact page.		
N-005	Check the delivery options on a product page, in the cart and at checkout.	Exactly two: Inside Dhaka and Outside Dhaka, with their charges and delivery times. Office Pickup is not offered anywhere. (It is listed in Settings as switched off, so it can be turned back on if pickup ever returns.)		
N-005a	Open checkout with something in the cart and watch the Delivery line in the order summary as the page loads.	It reads 'Calculating...' for a moment, then the real charge (Tk 50 for Inside Dhaka). It never flashes 'Free'.		
N-006	Change the Inside Dhaka charge and save. Open a product page.	The Shipping options panel shows the new amount, and so does the cart and checkout.		
N-006a	Scroll to 'Checkout & rewards'. Read the current values.	Advance payment, bKash/Nagad payment window, reward points, refer & earn and the prepaid delivery discount are all shown in taka, minutes and points -- not paisa.		
N-006b	Enter 150 as the advance percent and save.	Refused: 'Percent: 1-100'. Nothing is saved.		
N-007	Under Checkout & rewards, change the payment window (minutes) and open checkout with bKash.	The warning states the new number of minutes.		
N-008	Under Checkout & rewards, change the advance percentage and minimum.	The 'Pay now' figure at checkout follows the new rule.		
N-009	Under Checkout & rewards, change what 1 point is worth and the minimum points to spend.	The account page and the checkout redemption line reflect the new values.		
N-010	Under Checkout & rewards, change the Refer & earn amounts.	The Refer & earn page quotes the new figures.		
N-011	Under Checkout & rewards, change the bKash and Nagad delivery discounts.	The cart's 'Total by payment method' shows the new saving for bKash and Nagad.		

17. Points and referrals -- the loyalty side

Set reward points on at least one product before starting (see P-016).

ID	What to do	What should happen	Pass	Notes
L-001	As a SIGNED-IN customer, order a product worth 50 points, quantity 2.	The cart promised 100 points.		
L-002	Mark that order delivered in admin, then check the customer's account.	100 points added, listed under Refer & earn with the order reference.		
L-003	Place a second order and tick 'Use my points' at checkout.	Points come off the amount due, at the configured rate.		
L-004	Check the balance afterwards.	Reduced by exactly what was spent, and never below zero.		
L-005	Try to redeem with fewer points than the minimum.	The redemption option is not offered.		
L-006	As a GUEST (not signed in), order a product with points and have it delivered.	The cart said the points are held for the mobile number.		
L-007	Now sign in (or sign up) with an account carrying THAT SAME phone number.	The held points appear in the balance automatically.		
L-008	Sign in with an account carrying a DIFFERENT phone.	Those points are NOT claimed. They stay held.		
L-009	Open Account -> Refer & earn and copy the referral link.	A link containing your own code.		
L-010	Open that link in a private window and create a new account.	Sign-up works. The referral is recorded as pending.		
L-011	Place an order on the new account and mark it delivered.	Both sides are credited: the referrer and the new customer.		
L-012	Mark the same order delivered again.	No second payout. The credit is unchanged.		
L-013	Spend the credit at checkout with 'Use my credit'.	Applied against the order. Balance drops to match.		

18. Checkout location -- the map

Run on a phone as well as a desktop. The prompt only appears over HTTPS.

ID	What to do	What should happen	Pass	Notes
X-001	At checkout, press 'Use my location' and ALLOW the prompt.	A pin is dropped and the area and city fields fill in.		
X-002	Check which delivery option got selected.	A pin inside Dhaka selects Inside Dhaka by itself. No city dropdown to pick from.		
X-003	Press 'Use my location' and DENY the prompt.	A clear message offers the map and typing instead. Checkout still works.		
X-004	Type an address in the search box, e.g. 'Dhanmondi 27 Dhaka'.	Suggestions appear. Picking one drops the pin and fills the fields.		

ID	What to do	What should happen	Pass	Notes
X-005	Press Enter in the search box.	It searches. It does NOT submit the order.		
X-006	Drag the pin somewhere else on the map.	The address fields update to the new spot.		
X-007	Edit the area and street fields by hand after using the map.	Your typing is kept. The map does not overwrite it.		
X-008	Drag the pin outside Bangladesh, or use a VPN abroad and press 'Use my location'.	Refused with a message. No delivery charge is set from a foreign pin.		
X-009	Place the order with a pin set, then open it in admin.	Latitude, longitude and the place label are stored on the order.		
X-010	Place an order WITHOUT touching the map.	Works normally. The map is optional.		

19. A full run from empty -- the end-to-end check

If you only have time for one thing, do this. It touches every part in the order a real day uses them.

ID	What to do	What should happen	Pass	Notes
E-001	Create a category.	Appears on the storefront nav and drawer.		
E-002	Create a product in it: price, stock, reward points, image, description.	Appears on the storefront listing and its category page.		
E-003	Add a quantity break and a bundle involving it.	Both advertise correctly on the product page.		
E-004	Create a coupon.	Applies in the cart.		
E-005	Create a hero banner pointing at the new category.	Shows on the homepage and the button goes to the right place.		
E-006	As a customer, add the product to the cart and check the delivery options.	Three options, each with its charge and time.		
E-007	Set a map location at checkout.	Address fills in, delivery option selected automatically.		
E-008	Apply the coupon at checkout.	Discount shown in the Order summary.		
E-009	Place the order with cash on delivery.	Success page with an order number. NOT a fake success -- the order really exists.		
E-010	Find that exact order in admin.	Present, with the right lines, total, address, coordinates and payment method.		
E-011	Check stock.	Down by the quantity ordered.		
E-012	Move the order through to delivered.	History records every step.		
E-013	Check the customer's points.	Awarded once, matching the product's points times the quantity.		
E-014	Check Reports.	The order's revenue and margin appear in the current window.		

ID	What to do	What should happen	Pass	Notes
E-015	Place a second order and redeem the points.	Amount due reduced. Balance reduced to match.		
E-016	Cancel that second order.	Stock returns.		
E-017	Tidy up: archive the test product, delete the test category, coupon, promotions and banner.	All removed. The storefront looks as it did before the test.		

Sign-off

Fill this in when the run is finished. A run with failures is still a useful run -- record them rather than repeating the whole plan.
